

Felbamate (fel BAM ate) Tablets, USP

Read this Medication Guide before you start taking felbamate tablets, USP and each time you get a refill. There may be new information. This information does not take the place of talking to your healthcare provider about your medical condition or treatment.

What is the most important information I should know about felbamate tablets, USP?

Do not stop taking felbamate tablets without first talking to your healthcare provider.

Stopping felbamate tablets suddenly can cause serious problems.

Felbamate tablets can cause serious side effects, including:

1. Felbamate tablets may cause serious blood problems that may be life-threatening.

Call your healthcare provider right away if you have any of the following symptoms:

- Fever, sore throat or other infections that come and go or do not go away
- Frequent infections or an infection that does not go away
- Easy bruising
- Red or purple spots on your body
- Bleeding gums or nose bleeds
- Severe fatigue or weakness

2. Liver problems that may be life-threatening. Call your healthcare provider right away if you have any of these symptoms:

- yellowing of your skin or the whites of your eyes (jaundice)
- dark urine
- nausea or vomiting
- loss of appetite
- pain on the right side of your stomach (abdomen)

3. Like other antiepileptic drugs, felbamate tablets may cause suicidal thoughts or actions in a very small number of people, about 1 in 500.

Call your healthcare provider right away if you have any of these symptoms, especially if they are new, worse, or worry you:

- thoughts about suicide or dying
- attempts to commit suicide
- new or worse depression
- new or worse anxiety
- feeling agitated or restless
- panic attacks
- trouble sleeping (insomnia)
- new or worse irritability
- acting aggressive, being angry, or violent
- acting on dangerous impulses
- an extreme increase in activity and talking (mania)
- other unusual changes in behavior or mood

How can I watch for early symptoms of suicidal thoughts and actions?

- Pay attention to any changes, especially sudden changes, in mood, behaviors, thoughts, or feelings.
- Keep all follow-up visits with your healthcare provider as scheduled.

Call your healthcare provider between visits as needed, especially if you are worried about symptoms.

Do not stop felbamate tablets without first talking to a healthcare provider.

Stopping felbamate tablets suddenly can cause serious problems. You should talk to your healthcare provider before stopping. Stopping a seizure medicine suddenly in a patient who has epilepsy can cause seizures.

Suicidal thoughts or actions can be caused by things other than medicines. If you have suicidal thoughts or actions, your healthcare provider may check for other causes.

What is felbamate tablets, USP?

Felbamate tablets is a prescription medicine used when other treatments have failed in:

- adults alone or with other medicines to treat:
 - partial seizures with and without generalization
- children with other medicines to treat:
 - seizures associated with Lennox-Gastaut syndrome

What should I tell my healthcare provider before taking felbamate tablets, USP?

Before you take felbamate tablets, tell your healthcare provider if you:

- have kidney problems
- have or have had depression, mood problems, or suicidal thoughts or behavior
- have any other medical conditions
- are pregnant or plan to become pregnant. It is not known if felbamate tablets can harm your unborn baby. Tell your healthcare provider right away if you become pregnant while taking felbamate tablets. You and your healthcare provider will decide if you should take felbamate tablets while you are pregnant.
 - If you become pregnant while taking felbamate tablets, talk to your healthcare provider about registering with the North American Antiepileptic Drug (NAAED) Pregnancy Registry. The purpose of this registry is to collect information about the safety of antiepileptic medicine during pregnancy. You can enroll in this registry by calling 1-888-233-2334.
- are breastfeeding or plan to breastfeed. Felbamate may pass into your breast milk. You and your healthcare provider should decide if you should take felbamate tablets while you breastfeed.

Tell your healthcare provider about all the medicines you take, including prescription and non-prescription medicines, vitamins, and herbal supplements.

Taking felbamate tablets with certain other medicines can cause side effects or affect how well they work. Do not start or stop other medicines without talking to your healthcare provider.

Know the medicines you take. Keep a list of them and show it to your healthcare provider and pharmacist when you get a new medicine.

How should I take felbamate tablets, USP?

- Take felbamate tablets exactly as your healthcare provider tells you. Your healthcare provider will tell you how much felbamate tablets to take and when to take it.
- Your healthcare provider may change your dose of felbamate tablets. Do not change your dose of felbamate without talking to your healthcare provider.
- Because of the risk of serious blood and liver problems, your healthcare provider may do blood tests before you start and while you take felbamate tablets.
- If you take too much felbamate tablets, call your healthcare provider or local Poison Control Center right away.
- Do not stop felbamate tablets without first talking to your healthcare provider.

What should I avoid while taking felbamate tablets, USP?

- Felbamate tablets can cause drowsiness and dizziness. Do not drink alcohol or take other medicines that make you sleepy or dizzy while taking felbamate tablets, until you talk with your doctor. Taking felbamate tablets with alcohol or drugs that cause sleepiness or dizziness may make your sleepiness or dizziness worse.
